01 PROFILE

DevOps and Infrastructure Engineer with 12+ years of experience building secure, scalable systems across AWS, GCP, and Azure. I bring deep expertise in infrastructure-as-code (Terraform, CloudFormation), CI/CD, Kubernetes (EKS), and observability (Prometheus, Grafana Loki), with a focus on automation, security, and performance.

I specialise in enabling fast-moving teams through resilient infrastructure and developer-first tooling, including Helm/Crossplane-based cluster management, Cilium networking, and GitHub Actions automation.

I thrive at the intersection of infrastructure and engineering—particularly in security-focused environments like cybersecurity and AI. As an early adopter of LLMs and agentic workflows, I led the build of an internal AI PaaS, including middleware for GenAI services, secure model endpoints, and MCP servers for autonomous agent coordination across tools like Jira and GitHub. I also have hands-on experience with RAG, fine-tuning, vector DBs, and have delivered workshops on training and deploying LLMs.

02 EMPLOYMENT HISTORY

03/2023 — 06/2025	Platform Engineer at PortSwigger Ltd Manchester, London, Atlanta - Designed and built scalable, secure Kubernetes infrastructure (multi-cluster EKS) using IaC (CloudFormation, Helm, Crossplane, Cilium), accelerating onboarding and delivery across engineering teams. - Reduced deploy cycles from 2 weeks to minutes and cut CI/CD runtimes by 95% via custom GitHub Actions and internal tooling. - Championed GitOps, observability-by-default, and 12-factor adoption across platform architecture. - Led development of an internal AI PaaS. Supporting in-product GenAI features, RAG applications, fine-tuned models, and an LLM gateway (LiteLLM). - Developed secure MCP (Model Context Protocol) servers enabling workflows across systems like GitHub and Jira. - Drove platform vision and adoption as technical lead—leading developer training, building internal tooling, and influencing org-wide architecture. - Reverse-engineered ProjectDiscovery’s nuclei template generator to build an internal auto-scan engine (initially via LangChain, later replaced). Deployed as a secure serverless Lambda endpoint. Deployed form filling, recorded login and RAG over documentation Q&A prototypes and many, many more.
-------------------	--

12/2018 — 12/2022

DevOps Engineer at The Co-operative Group
(Contract)

Manchester

- Project: Co-operate Volunteer Matching Platform
- Architected AWS backend infrastructure for a public-facing platform using Serverless (Lambda, API Gateway, DynamoDB, Aurora). Enabled secure, scalable delivery pipelines via GitLab CI/CD and CloudFront.
- Project: Mobile Pharmacy App (NHS Integrations)
- Delivered secure backend infrastructure supporting integrations with NHS Spine, EMIS, and TPP. Built fully automated IaC pipelines using Terraform and Puppet across AWS/ECS.

Tech: AWS, Lambda, Terraform, GitLab CI, Serverless, Puppet, Aurora, CloudFront, VPC, IAM

12/2018 — Present

DevOps Consultant at sushiroll.io

worldwide

- Delivered full-stack infrastructure projects across multiple industries including healthtech and ecommerce. Built cloud-first platforms from inception to launch.

07/2018 — 12/2018

DevOps Engineer at Booking.com

Manchester

- Worked across global infrastructure teams focusing on automation, monitoring, and deployment pipelines.

05/2017 — 12/2018

Platform Engineer at ITV

Leeds, London, Manchester

- Supported large-scale migration to Kubernetes and modern CI/CD tooling.

03 EDUCATION

2008 — 2011

University of York

York

BachelorofArts(B.A.) Philosophy

2012 — 2013

The Manchester Metropolitan University

Manchester

Graduate Diploma in Law

04 SKILLS

AWS
